

Title: **Embedded Programmer**

Location: Albany, New York

Contact: Greg Magin – gmagin@proliant.net

Job Description

Our client creates m2m hardware for international and now US clients. They are building a portfolio of generic and custom made devices for the automotive market. Their hardware empowers large fleets to begin realizing their environmental impact. The data their system provides to customers helps lower their carbon footprint and reduce fleet costs. They like green!

They are a small business with a talented group of engineers. Increased interest in their products has encouraged them to begin looking for a new team member. They are looking for someone with a keen interest in developing software on embedded platforms. You can be a recent college grad or a seasoned veteran it doesn't matter.

These are the qualifications they are looking for:

- Embedded programming experience in C, C++ and Assembly
- Signal processing
- Real-world projects that you can demonstrate to us
- Designing and implementing drivers, firmware, boot loaders and low-level communications
- Experience with wireless communications (GSM, Zigbee, Bluetooth, CDMA)

Because they are a small company all of them take great pride in what they do. As such, they need someone that will really take ownership of what they create. The products that leave there have everyone's fingerprints on them (really!)

All of their employees enjoy:

- High end workstations with solid state drives and dual 24" LCD monitors
- Paid health, dental and vision plans
- Private offices with no more than 2 employees, all offices have at least one window.
- Bonuses based on performance
- Casual dress
- Plenty of parking right outside the building
- Gaggia espresso machine
- Free beverages (seltzer, soda, mineral water)
- Quiet location in Albany area
- Free lunch every Friday and regular parties
